Multifunctional damper actuator for adjusting air dampers in ventilation and air conditioning systems in buildings

- Air damper size up to approx. $1 \mathrm{~m}^{2}$
- Torque 5 Nm
- Nominal voltage AC/DC 24 V
- Control: Modulating DC 0 ... 10 V or variable
- Position feedback DC 2 ... 10 V or variable

- The damper actuator is not allowed to be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.
- It may only be installed by suitably trained personnel. All applicable legal or institutional installation regulations must be complied with.
- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- The cable is not allowed to be removed from the unit.
- When calculating the torque required, the specifications supplied by the damper manufacturers concerning the cross section, design and installation site, and the air flow conditions must be observed.
- The device contains electrical and electronic components and is not allowed to be disposed of as household refuse. All locally valid regulations and requirements must be observed.

## Product features

| Mode of operation | The actuator is controlled with a standard modulating signal of DC $0 \ldots 10 \mathrm{~V}$ and travels to the <br> position defined by the control signal. Measuring voltage $U$ serves for the electrical display of the <br> damper position $0 \ldots 100 \%$ and as slave control signal for other actuators. |
| :--- | :--- |
| Parameterisable actuators | The factory settings cover the most common applications. Input and output signals and other <br> parameters can be altered with the MFT-H parameterising device or the BELIMO Service Tool, <br> MFT-P. |
| Simple direct mounting | Simple direct mounting on the damper spindle with a universal spindle clamp, supplied with an <br> anti-rotation strap to prevent the actuator from rotating. |
| Manual override | Manual operation with self-resetting pushbutton possible (the gear is disengaged for as long as <br> the button is pressed). |
| Adjustable angle of rotation | Adjustable angle of rotation with mechanical end stops. |

High functional reliability
The actuator is overload-proof, requires no limit switches and automatically stops when the end stop is reached

Home position When the supply voltage is switched on for the first time, i.e. at commissioning or after pressing the "gear disengagement» switch, the actuator travels to the home position.

| Pos. direction of <br> rotation switch | Home position |
| :--- | :--- |
|  | $\mathrm{Y}=0$ |
| $\mathrm{Y}=0$ | cow |

The actuator then moves into the position defined by the control signal.

4 ... 20 mA
Master/Slave control (position-dependent)

Position indication

The $500 \Omega$ resistor converts the $4 \ldots 20 \mathrm{~mA}$ current signal to a voltage signal DC $2 \ldots 10 \mathrm{~V}$

Functional check

## Procedure

- Apply AC 24 V to connection 1 and 2
- Disconnect connection 3 .
- For direction of rotation 0:

Actuator turns in the direction of

- For direction of rotation 1:

Actuator turns in the direction of

- Short circuit connections 2 and 3 :
- Actuator runs in the opposite direction

Functions for actuators with specific parameters

Override control and limiting with AC 24 V with relay contacts

Override control and limiting with AC 24 V with rotary switch

${ }^{1)}$ Caution! This function is only guaranteed if the start point of the operating range is defined as min. 0.6 V .

## Operating controls and indicators

(1) Direction of rotation switch

Switching over: Direction of rotation changes
(2) Pushbutton and green LED display

Off: $\quad$ No voltage supply or malfunction
Green on: Operation
Press button: Switches on angle of rotation adaption followed by standard operation
(3) Pushbutton and yellow LED display

Off: Standard operation
Yellow on: Adaption or synchronising process active
Press button: No function
(4) Gear disengagement switch

Press button: Gear disengaged, motor stops, manual operation possible
Release button: Gear engaged, synchronisation starts, followed by standard operation
(5) Service plug

For connecting parameterising and service tools
