Safety notes

Ĺ	<ul> <li>This device has been designed for use in stationary heating, ventilation and air-conditioning systems and must not be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.</li> <li>Outdoor application: only possible in case that no (sea) water, snow, ice, insolation or aggressive gases interfere directly with the device and that it is ensured that the ambient conditions remain within the thresholds according to the data sheet at any time.</li> <li>Only authorised specialists may carry out installation. All applicable legal or institutional installation regulations must be complied with during installation.</li> <li>The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.</li> <li>Cables must not be removed from the device.</li> <li>Self adaptation is necessary when the system is commissioned and after each adjustment of the angle of rotation (press the adaptation push-button once).</li> <li>To calculate the torque required, the specifications supplied by the damper manufacturers concerning the cross-section and the design, as well as the installation situation and the ventilation conditions must be observed.</li> <li>The device contains electrical and electronic components and must not be disposed of as household refuse. Product features	
Operating mode	The actuator is connected with a standard control signal of 010 V and drives to the position defined by the control signal. Measuring voltage U serves for the electrical display of the damper position 0100% and as control signal for other actuators.
Simple direct mounting	Simple direct mounting on the damper shaft with a universal shaft clamp, supplied with an anti-rotation device to prevent the actuator from rotating.
Manual override	Manual override with push-button possible (the gear train is disengaged for as long as the button is pressed or remains locked).
Adjustable angle of rotation	Adjustable angle of rotation with mechanical end stops. A minimum permissible angle of rotation of 30° must be allowed for.

Product features			
High functional reliability	The actuator is overload protected, requires no limit switches and automatically stops when the end stop is reached.		
Home position	The first time the supply voltage is switched on, i.e. at the time of commissioning, the actuator carries out an adaptation, which is when the operating range and position feedback adjust themselves to the mechanical setting range.		
	The detection of the mechanical end stops enables a gentle approach to the end positions, thus protecting the actuator mechanics.		
	The actuator then moves into the position defined by the control signal.		
	$(1) \frac{Y = 0 V  ccw}{Y = 0 V}$		
Adaptation and synchronisation	An adaptation can be triggered manually by pressing the "Adaptation" button. Both mechanical end stops are detected during the adaptation (entire setting range). Automatic synchronisation after pressing the manual override button is configured. The synchronisation is in the home position (0%).		
	The actuator then moves into the position defined by the control signal.
